Educational aims and objectives

This course provides an in-depth understanding of interpreting normal and pathological radiographic findings in orthopaedic cases, covering both adult and paediatric patients. Participants will learn how to correlate imaging with clinical decision-making, enhancing their skills in musculoskeletal radiology.

Who should attend?

The course is designed for Foundation Doctors, Core Trainees, Trust Doctors, A&E Doctors, General Practitioners, Medical Students, Physiotherapists, Advanced Nurse Practitioners and any healthcare professional with an interest in orthopaedics and musculoskeletal care.

By the end of the course, participants will be able to:

- Identify normal radiographic anatomy
- Recognise key orthopaedic pathologies in trauma and elective conditions on both Paediatrics and adults
- Apply radiographic measurements to the upper limb, lower limb, and spine
- Link imaging findings with orthopaedic clinical decision-making
- Engage in case discussions with expert-led panels.

What delegates say about this course

"The course was ran excellently. All sessions were on time and prompt and the lecturers were well versed and prepared with slides and course remit."

"Excellent set up and very efficient!"

Programme
